Optum Sage AI: Journey from Targeted Solutions to Enterprise AI Platform

Journey from **Targeted Solutions** to an **Enterprise AI Platform**

AI-Powered Agents | Enterprise Governance

Transforming Clinical and Operational Workflows at Scale

© 2025 UnitedHealth Group. All rights reserved. Confidential & Proprietary.

Sage AI Platform Overview

Unified, secure AI facilitator enabling federated teams with enterprise-grade governance and low-code ecosystem

Core Platform Components

Platform Purpose & Structure
Unified, secure AI facilitator enabling federated teams

- Shared platform team: Development kits, APIs
- Enterprise-standard security policies
- Federated development within governance
- Business unit pilots, Sales, and Clinical AI SMEs

Agent Development Kits (ADKs)
Enterprise-grade, pre-built accelerators and frameworks

- LangChain framework integration
- Pre-built agents
- Vertical AI SME templates
- Platform-wide observability and logging

Visual Architecture
Phases AI solution prototyping and production deployment

- Drag-and-drop interface
- Visual node editing
- Intelligent canvas
- Rapid prototyping without coding

Enterprise-Grade Wrapper

Zero Trust Security
Access control and security posture enforcement

Observability
Execution traces, metrics, and monitoring

Auditability
Comprehensive logging and compliance tracking

Roadmap & Strategic Role

Current Beta
Focus on adoption for Jan-April 2026 session — *ACTIVE*

Production Ready
Scalable, hardened agents via ADK wrapper — *UPCOMING*

Future Expansion
Enterprise platform with runtime and automated governance and enterprise-scale AI deployment capabilities — *ROADMAP*

Key Benefits

Speed & Democratization
Empowers non-technical stakeholders to design AI solutions without deep technical expertise

Governance Platform
Ensures low-code freedom, Sage architects uncompromised security and business policies via ADK wrapper

Scalable Platform
Transition with Pioneer or production implementation via vertical ADK wrapper

© 2025 UnitedHealth Group. All rights reserved. Confidential & Proprietary.

Current State: AI Capabilities in Production

Two AI agents capacitive delivering measurable efficiency gains in production today

100	15	1,000,000	15
Call Hours	Hours/Week	Call Summaries Delivered	Active
Summaries Generated	Time Saved		Business Tenants

Summarization Agent

Curo Recap

Automatically summarizes patient records and chart interactions, providing care teams with concise read-to-know summaries.

- 100 call hours of Curo Sessions
- 15 hours/week saved per call
- Expanding to Advocacy & TCM

Documentation Agent

Auto Call Documentation

Integrated with Omni platform and voice analytics to transcribe and summarize call conversations in real-time, producing structured call notes.

- 15 business tenants active
- 1M+ call summaries delivered
- Monthly tenant onboarding

Pre-built Templates

- Chat on Data — Conversational data access ability to chat on any TEMPO
- Chat on Documents — Conversational document ability to chat on any document, PDF, JSON, images
- Speech to Text — Voice to text transcription for Persons and Providers
- Summarization — Summarization for clinical notes, transcripts, Chart, Chat, Critical Notes
- Translation — Support for 50 language translations

© 2025 UnitedHealth Group. All rights reserved. Confidential & Proprietary.

Summarization Agent: Curo Recap

Improving care coordination by automatically summarizing patient records and past interactions

55	100	10-15
Pilot Users	Summarizations	Hours Saved
Care Managers Trained	Business Hours	Per Call

Usage Distribution

Key Benefits

- Reduces prep time by 10-15 minutes per call
- Improves decision-making consistency
- Accelerates care coordination workflows
- Enhances patient interaction quality

Workflow Process

1. **Patient Record Access** — Agent retrieves patient data from Epic, Care Manager, and Medical Record systems
2. **AI Processing** — LLM analyzes patient data for relevant information
3. **Summary Generation** — Creates concise, actionable summary with key insights
4. **Care Team Review** — Care Manager reviews and gains patient context

Expansion Plans

Beyond Curo Recap Care Delivery, the summarization agent is being expanded to other areas including Advocacy and Transition Care Management within CCM to leverage efficiency gains across teams.

© 2025 UnitedHealth Group. All rights reserved. Confidential & Proprietary.

Documentation Agent: Auto Call Documentation

Transforming call notes from through AI-powered transcription and summarization integrated with Omni platform

1M+	15	Monthly
Call Summaries	Active Tenants	Tenant Onboarding
Total Delivered	Business Units	Tenant Teams

Key Features

- **Real-time Transcription** — AI-powered voice analytics transcribes conversations as they occur
- **Structured Summaries** — Automatically generates structured call notes and interaction summaries
- **Instant Processing** — Processes call summaries immediately after call completion
- **Multi-tenant Support** — Supports 15 business tenants with tenancy separating of data

Business Impact

- Reduces human error in documentation
- Eliminates variations in call notes quality
- Frees agents to focus on customer needs
- Improves call center productivity
- Enhances customer experience consistency

Platform Integration

- Optum Omni Platform
- Voice Analytics System
- UHC & Optum Contact Centers

Real-time Processing: Integrated workflow ensures every customer interaction is accurately captured and summarized, reducing after call work time and improving customer experience consistency.

© 2025 UnitedHealth Group. All rights reserved. Confidential & Proprietary.

Transition Phase: Collaborative Innovation

Broadening access through no-code/low-code AI tools and enabling collaborative workflow agents through Agent Development Kits (Agra & Vertex AI ADKs)

Dual-Track AI Development Platform

Multi-tenant Architecture
Tenants, Workspaces, Teams and Users hierarchy ensures independent collaboration

No-code Builder (Flexion)
Drag-&-drop canvas Flexion platform enables non-technical authoring without coding

Advanced Development (Agra SDK)
Agra SDK and ADK provide tools for developers to build custom agents

Safe Innovation Sandbox
Non-production environment for experimentation and rapid agent iteration

Dual-Track Development Platform

No-code Track
Flexion in Platform for business users

- Tenants
- Workspaces
- Teams
- Users

Advanced Development
Agra SDK / Vertex AI SDK for developers

- Tenants
- Workspaces
- Teams
- Users

In-Flight AI Use Cases

- **PJP Scheduling Agent** — LIVE
  Automation platform for physician scheduling for appeals process
- **SDLC Agents (StoryCoin/ 2.0, ArchMaker, TestGenie)** — LIVE
  Agentic SDLC automation for Platform teams
  - Impact: StoryCoin 2.0 productivity gains in Product Engineering
- **Prior Authorization Support** — PENDING
  AI agent to assist with prior authorization processes
  - Impact: Accelerates approval workflows
- **Intelligent Task Routing Agent** — PENDING
  Intelligently assigns the right task to the right agent at the right time for optimal workflow efficiency
  - Impact: Optimizes care team and workflow coordination
- **Case Validation Agent** — PENDING
  Automatically validates and validates cases by analyzing the data and checking procedural eligibility
  - Impact: Streamlines case review and coordination

Governance Challenge
With the growing ecosystem of powerful AI agents acting as digital extensions of clinicians, Optum Health recognized the need for strong governance and ethical guidance to ensure responsible, transparent, and trustworthy AI adoption across the organization.

Key Concern: Manual governance and ad-hoc review would not scale. A systematic, automated approach is required to enforce ethical and compliance standards across all AI solutions in the portfolio.

The Need for UHG AI Platform (UAIP)

Scaling AI responsibly across UnitedHealth Group requires a unified platform for governance, innovation, and enterprise-wide deployment

Current AI Landscape at UHG

1,000+	Fragmented	Manual
AI Initiatives	Governance Approaches	Governance Processes

From transcribing clinician patient conversations to automating claims processing and enhancing customer service, UHG has extensive AI initiatives across its business units. However, this rapid adoption has created fragmented governance approaches. Establishing a unified platform approach is essential for standardized development processes embedded with automated governance.

Current Challenges

Fragmented AI Solutions
Different business units developing AI solutions independently, creating inconsistent governance and duplicate efforts

Impact: Duplicate efforts and inconsistent governance

Governance Complexity
Ensuring responsible AI across diverse use cases requires sophisticated oversight mechanisms

Impact: Risk management and compliance risks

Limited Reusability
Proven AI solutions cannot easily be shared across business units

Impact: Technology assets and proven capabilities

UAIP Platform Benefits

Unified AI Infrastructure
Centralized platform for AI development and deployment

Value: Accelerates development cycles

Automated Governance
Reusable components and standardized governance frameworks

Value: Ensures responsible AI at scale

Enterprise Scalability
Automated compliance and ethical AI monitoring

Value: Responsible AI at scale with reduced risk

Vision for UAIP

"Empower UHG with a unified AI platform that accelerates innovation while ensuring responsible, transparent, and trustworthy AI adoption across all business units, maintaining competitive advantage through rapid AI capability development."

© 2025 UnitedHealth Group. All rights reserved. Confidential & Proprietary.

Governance & Responsible AI by Design

Embedding UHG's Responsible AI principles into every aspect of the AI lifecycle through systematic governance controls

UHG Responsible AI (RAI) Guiding Principles

Reliability
AI systems perform consistently and accurately across diverse scenarios

Fairness
Bias testing and mitigation for vulnerable populations

Accountability
Clear audit trails and human oversight for high-stakes decisions

Transparency
Explainable AI decisions with clear reasoning and documentation

Privacy & Security
HIPAA compliance and robust data protection throughout the lifecycle

Continuous Improvement
Ongoing monitoring and refinement of AI model performance

Governance Implementation in UAIP

- **AI Code of Ethics** — Just as Employees follow UHG's Code of Conduct, AI agents will be governed by automated ethical guidelines
- **Automated Guardrails** — Policy-driven, data-driven algorithms, and proxy filters built into development pipelines
- **Cross-functional Review** — Ethicists, legal, compliance, and technical teams review AI models
- **Continuous Monitoring** — Real-time oversight of AI agent behavior with automated alerts for anomalies

AI Agent Vetting Process

"Every AI model or 'digital worker' on UAIP will undergo the same rigor as a new hire"

- **Vetted for Compliance** — Comprehensive ethical, legal, and compliance assessment
- **Aligned to UHG Values** — Ensures AI decisions reflect organizational principles
- **Monitored Continuously** — Ongoing performance and compliance assessment

Regulatory & Compliance Standards

© 2025 UnitedHealth Group. All rights reserved. Confidential & Proprietary.

- UARA Privacy and Security Rules
- FIPA, HIPAA, Medical Device Guidelines
- UAS Hexagonal Use of Model Data
- Clinical Quality and Safety Standards
- Data Governance and Privacy Regulations

Durable Responsibility: UAP Constructs responsible AI principles "from paper to practice," ensuring AI systems are designed, developed, and deployed in a consistently fair, safe, and transparent manner across the entire UHG enterprise.

Accelerating Innovation and Reuse

Accelerating Innovation and Reuse

UAP dramatically speeds up AI solution delivery through reusable components, common infrastructure, and a foundation built on best of breed models and AI assistance.

Core Platform Components

Unified Gateways
Enterprise-wide policy mesh, access control, encryption keys, and compliance logging
- LLM Gateway
- Agent Gateway (agent to agent) A2A
- MCP Gateway
- Intelligent workload routing
- Federated MCP Servers by Business Units

AI Marketplace
Enterprise App Store for AI models, agents, knowledge bases and tools
- Curated and discovery of agents
- Model control and logging
- Reusable models and workflows
- Cross business unit sharing
- Built in governance and compliance

Common Tools & DevOps
Standardized AgentOps infrastructure and shared services
- Integrated Platform and Machine Identity Agents and AI components
- Accelerated AI deployment
- Agent Registry, Prompt Registry, Tools
- Centralized model observability
- Performance monitoring Dashboards

Innovation Acceleration Benefits

Avoid lower cost-in
Prevent duplicative efforts and lower cost of ownership

Intelligent Routing
Optimize performance, latency, and cost based on task complexity

Reusable Components
Accelerate development and ensure business units without deployment

Faster Time to Market
Accelerate AI adoption through pre-approved, governed components

Strategic Impact on Innovation

Rapid Development: Teams AI ideas can be rapidly developed by assembling existing components under UAP's governance framework, dramatically reducing time from concept to production.

Balanced Approach: UAP enables governance doesn't slow innovation. Instead, it propels it by providing a safe, efficient launchpad for AI solutions across the enterprise.

Focus on Value: By handling AgentOps complexity, UAP lets AI Engineers focus on solving business problems instead of engineering infrastructure, accelerating value delivery.

Build vs Buy: Strategic Decision Analysis

Build vs Buy: Strategic Decision Analysis

Comprehensive comparison of building UAP in-house versus purchasing an off-the-shelf AI platform

The Employee vs Contractor Analogy

Think of AI platform decisions like workforce strategy - each approach has distinct advantages and trade-offs.

Building In-House
Hiring & Nurturing Employees
- Control Your Training
  Complete control over alignment to UHG's specific needs and workflows
- Own The Behavior
  Full control over agent behavior and decision-making processes
- Instill Your Values
  Embed Optum/UnitedHealth Group ethical standards from day one
- Guide Development
  Long-term strategic evolution aligned with business objectives

Investment Mindset: Higher upfront cost, but builds lasting organizational capability

Buying Off-the-Shelf
Contracting for Pre-trained Agents
- Fast Deployment
  Rapid implementation with immediate implementation capability
- Standardized Approach
  Proven frameworks and best practices accelerate ramp-up
- Limited Adaptability
  Constrained by vendor's framework and development roadmap
- Reduced Control
  Dependent on vendor priorities and external decision-making

Speed Mindset: Lower initial investment, but ongoing dependency and constraints

The Strategic Choice

Just as successful organizations invest in developing their own talent while also relying vendors on contractors, **building UAP in-house** creates a strategic asset that grows with UHG's unique organizational values and provides the flexibility to innovate at healthcare's pace.

Alignment with UHG Needs

Build In-House (UAP)

Technical Control Requirements
Full control over policy layers, workflows, and RLHF policies. Full customization for healthcare specific workflows.
- Custom policy engine integration
- Healthcare workflow optimization
- UHG quality control mechanisms

Buy Off-the-Shelf

Generic Capabilities
Vendor roadmaps optimized for SV UHG processes. One-size-fits-all solutions with limited customization.
- Standard workflow support
- Generic quality metrics
- Limited healthcare specialization

Governance & Compliance

Build In-House (UAP)

Complete Control
UAP includes UHG Responsible AI oversight from day one. Supports HIPAA, private data, and healthcare rules.
- Full audit trail capabilities
- Custom rule sets
- UHG-specific escalation paths

Buy Off-the-Shelf

Vendor-Driven Governance
Built to enterprise features, but UHG must trust vendor's framework. May not align with healthcare specifics.
- Vendor compliance focus
- Limited customization
- Generic escalation paths

Time-to-Market

Build In-House (UAP)

Initial Investment, Long-term Speed
Higher development effort, but faster deployment through reusable components and accelerated iterations.
- Initial development time
- Reusable component library
- Continuous improvement

Buy Off-the-Shelf

Quick Start, Vendor Roadmap Dependent
Ready-made platform for pilots, but integration with UHG systems and process customization takes time.
- Immediate pilot capability
- Vendor roadmap dependency
- Integration complexity

Flexibility & Review

Build In-House (UAP)

Highly Flexible, No Lock-In
Will remain UI-agnostic and modular architecture. A agents designed for enterprise integration.
- Adapt to new requirements
- Multi-UI support
- Cross-department reusability

Buy Off-the-Shelf

Platform Lock-in Risk
Tied to vendor development. Limited flexibility. Pricing uncertainty outside contract terms. Vendor dependency.
- Vendor roadmap dependency
- Pricing uncertainty
- Platform-specific limitations

Cost & Talent

Build In-House (UAP)

Investment with Strategic Payoff
Requires upfront talent and infrastructure investment, but reduces long-run expenses and builds internal IP.
- Talent development
- Reduced IP licensing
- Long-term cost optimization

Buy Off-the-Shelf

Lower Upfront, Ongoing Fees
Lower initial investment and faster deployment, but involves licensing costs and vendor dependency.
- Subscription fees
- Vendor dependency
- Talent acquisition

Strategic Verdict

Build In-House (UAP) Recommended

Strategic Autonomy: Complete control over AI platform evolution and capabilities

Tailored Capabilities: Custom built for UHG's unique healthcare workflows and requirements

Enterprise Foundation: Scalable platform that will be used across business units

Industry Analysis: "Building gives you control, customizability, and future proof architecture. Buying speeds up deployment but often locks you into rigid platform constraints and capabilities." Given UHG's scale and complexity, the control and customization benefits outweigh speed to market considerations.

Sage AI Platform Architecture

Sage AI Platform Architecture

High-level architecture showing the separation between control plane (management) and data plane (runtime/hosting) components

Platform Architecture Overview

Detailed Platform Architecture
Comprehensive A Platform Control plane Plane Components

AI Platform Control Plane
- Control Plane UI
- Policy Engine
- Sage AI Platform Web App
  - Agent Registry
  - Prompt Registry
  - Model Registry
  - Tool Registry
- AI Models
  - Anthropic
  - Gemini
  - Azure OpenAI
  - Amazon Bedrock
  - Open Source
  - Fine-Tuned Models
- AI Marketplace
  - Agents
  - Knowledge Bases
  - Tools
  - Pre-Built Workflows
- Control Plane Services
  - Tenant Mgmt Service
  - Model Mgmt Service
  - Prompt Mgmt Service
  - Agent Mgmt Service
  - Tool Mgmt Service
  - Knowledge Mgmt Service
  - Pre-Built Workflows Mgmt Service
  - Sage AI CI/CD
  - Sage AI Observability Service

AI Platform Data Plane
- Data Plane UI
- Sage AI Data Plane Web App
- Agent Runtime
- Azure Kubernetes Services
  - Agent Runtime
  - Agent Gateway
  - Agent Observability
- Cloud Service Provider Managed Kubernetes Services
  - Amazon Elastic Kubernetes Service

  - Identity Service
  - Secrets Service
  - Encryption Service
  - Security Service

External Integrations & Services
- Anthropic API
- Azure OpenAI
- Amazon Bedrock
- Gemini
- Open Source Models
- Fine-Tuned Models
- Azure Cognitive Services
- Azure AI Search
- Azure Key Vault
- Azure Monitor
- Azure Storage
- Azure Cosmos DB
- Azure Service Bus
- Azure Event Grid
- UHG LLM Gateway
- Azure AD / Entra ID
- Azure Key Vault
- Azure Monitor
- Azure Storage

The architecture demonstrates clear separation of concerns with the Control Plane managing platform operations and governance, while the Data Plane handles runtime execution and data processing in customer environments.

AI Platform Control Plane
Management and governance layer responsible for platform administration, user interfaces, and centralized services.
- **UI Studio**
  Sage AI Platform Web App provides dashboards, prompt editors, and management interfaces.
- **AI Marketplace**
  Agent Hub, knowledge bases, pre-built templates, and tool registry for reusable components.
- **AI Governance Tower**
  Centralized control and observability with RLHF and ARPO policy enforcement.
- **Admin Console**
  Tenant provisioning, user management, usage monitoring, and billing.

AI Platform Data Plane
Runtime and hosting layer where AI agents execute, data is processed, and infrastructure operates in production.
- **Azure Kubernetes Services**
  Agent runtime environment with gateway services, RAG services, and observability.
- **Managed Database Services**
  Vector stores, knowledge bases, conversation stores and cache databases.
- **Cloud Resources**
  Dedicated cloud resources per Sage enterprise for isolation and performance.
- **Platform Ops**
  Infrastructure Resources per Ops using Terraform, Github Actions, Argo CD and Helm.

Sage AI Platform Core Services

Studio Services | Marketplace Services | Gitlab Services | Admin Services | Policy Services

Core Sage services provide the fundamental capabilities that support UAP control plane management and data plane operations.

Security & Integration Layers

- **Cloudflare WAF**
  Web Application Firewall for DDoS protection and traffic filtering.
- **Azure APIM**
  API Management for agent gateways and MCP gateway routing.
- **AM Gitlab 2.0**
  Identity and Access Management with Ping Federate integration.

Key Architecture Benefits

- **Separation of Concerns**
  Clear boundaries between management and runtime operations.
- **Multi-tenant Security**
  Complete tenant isolation with RBAC and fine-grained authorization.
- **Scalable Infrastructure**
  Independent scaling for control plane and data plane components.
- **Built in Governance**
  Integrated governance tower and policy enforcement.

UAP Operating Model

UAIP Operating Model

Team Topologies based operating model enabling federated innovation with centralized governance and platform capabilities

Platform Governance Teams
Cross-cutting oversight ensuring consistency and compliance
- Policy Enforcement
- Compliance Oversight
- Risk Management
- Standards Definition

Governance Mechanisms
- Cross-Platform Reviews
- Capability Roadmaps
- Standards Updates

Federated Teams (Value Stream Teams)
- UHG
- Optum Digital
- Optum Insight
- Optum Health & Financial
- Optum Rx

Core Team
- Enabling Team
  - Cross-functional specialists
  - Capability development
  - Training and enablement
  - Adoption acceleration
- Consultative Subjectmatter Team
  - Deep domain expertise
  - Complex problem solving
  - Technical consultation
- Stream Aligned Team
  - Business value delivery
  - Product ownership
  - Rapid iteration
- Platform Engineering Team
  - Infrastructure as code
  - Automation
  - Ops & Reliability
  - Platform Ops
  - Full Stackness
  - Security & Compliance
  - Site Reliability Engineering

Unified AI Platform
Sage AI Platform

Team Interaction Patterns

Collaboration
Federated Teams + Core Teams
Cross-team feature development and knowledge sharing for complex initiatives

Platform as a Service
Core Teams + Platform Engineering
Self-service platform capabilities and infrastructure provisioning

Governance
Platform Governance + All Teams
Governance and standards enforcement through automation

Operating Model Benefits

Federated Innovation
Business units maintain autonomy while leveraging shared platform capabilities

Reduced Cognitive Load
Teams focus on business value while platform handles infrastructure complexity

Scalable Architecture
Platform capabilities scale independently from application teams

Consistent Governance
Automated policy enforcement ensures compliance across all teams

Sage AI Transition to UIAIP

Sage AI Transition to UIAIP

How Sage AI evolves from business segment solution to cornerstone of UHG's enterprise AI platform

Transition Evolution

Current Sage AI
Foundational Capabilities
Proven AI agents delivering measurable value in production

- Conversational agent (Eva Health)
- Documentation Agent (Scribe Ext)
- Prior Auth Agent
- Multi-agent, MCP, composable delivered
- Established governance processes

Enhanced Sage AI
Platform Integration
Sage AI capabilities integrated into UAP platform services

- Migration to UAP infrastructure
- Enhanced governance automation
- Multi-agent orchestration patterns
- Cross-functional deployment

UIAIP Foundation
Enterprise AI Platform
Sage AI as cornerstone of UHG's unified AI platform

- Enterprise-wide agent deployment
- Automated governance and compliance
- Cross-business unit capabilities
- Strategic AI competitive moat

Approach

Phase 1: AI Studio Builder
GA EOMY
- Revamp/build AI development and deployment capabilities for AI artifacts
- Build Agent Proposal and Scoping Environment Prototyping
- Implement deployment workflows for Agent & Task AI Artifacts

Phase 2: Platform Integration
GA EOMY
- Integrate UAP with Sage AI CI/CD
- Integrate LLM Gateway & AI Remediation
- Implement Observability Stack

Phase 3: Enterprise Expansion
GA EOMY - EOMY
- Scale proven patterns across UHG business units
- Deploy enhanced governance automation capabilities
- Establish Sage AI as UAP's flagship capability

Strategic Vision: Sage AI as UIAIP Foundation

Sage AI's proven success in production provides the blueprint for UAP's enterprise-wide deployment. By transitioning Sage AI to serve as the foundation for enterprise implementation, UHG establishes a **battle-tested, governance-compliant AI platform** that can be confidently scaled across all business units while maintaining the highest standards of responsible AI deployment.

Proven
Production ready AI capabilities

Scalable
Enterprise wide deployment model

Governed
Responsible AI by design

From targeted solutions to enterprise platform - enabling responsible AI innovation at scale

Journey Highlights

Current State

Two AI agents in production

1M+ call summaries, 100 summaries/hour

Transition Phase

No-code collaboration platform

Federated innovation across teams

Future Vision

Enterprise AI platform

Governed, scalable AI deployment

Strategic Outcomes

- Consistent AI standards across UnitedHealth Group
- Reduced duplication and faster innovation cycles
- Responsible AI deployment at enterprise scale
- Enhanced clinical and operational efficiency
- Democratized AI development capabilities

Next Steps

Platform Development — Q2-Q4 2025

Complete in-house Sage AI Platform with automated governance

Enterprise Rollout — 2026

Deploy platform across business units with standardized processes

Scale & Optimize — Ongoing

Continuous improvement and expansion of AI agent capabilities

The Future of AI at Optum Health

Sage AI represents more than technology advancement—it's a strategic transformation that positions Optum Health to deliver AI-driven solutions responsibly and at scale, ultimately improving patient outcomes and operational excellence across the enterprise.

Innovation **Governance** **Scale** **Impact**
